IDEATION PHASE – EMPATHIZE & DISCOVER

EMPATHY MAP CANVAS

Indoor Gardening Services Management (IGSM)

Project Name	Indoor Gardening Services Management (IGSM)
Project Type	Individual Project

Introduction

The empathy map represents the perspective of an indoor plant owner and helps identify the user's behaviours, attitudes, goals, needs, and challenges related to indoor gardening maintenance services. The map is based on the problem identified during the ideation stage.

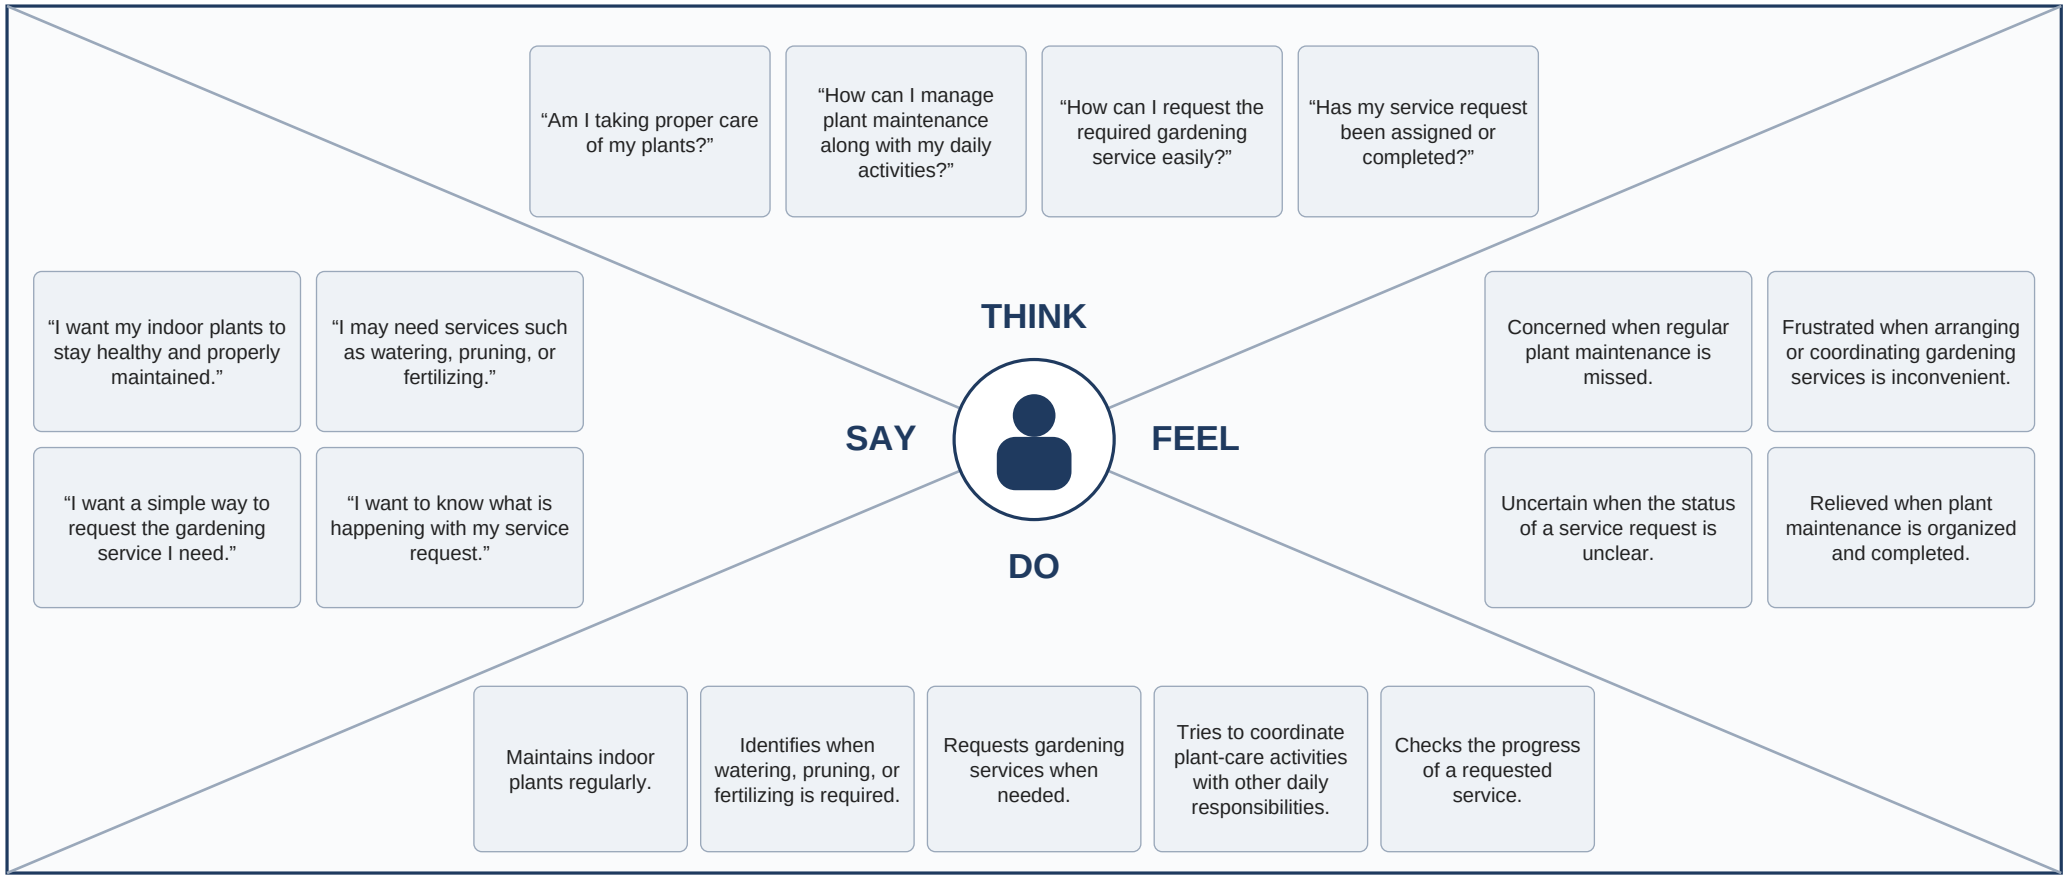
User / Customer

Indoor Plant Owner

An indoor plant owner who wants to keep plants healthy and properly maintained while managing regular daily responsibilities.

The empathy map canvas on the next page presents the perspective of the indoor plant owner under the headings Say, Think, Do, Feel, Pains, and Goals / Needs.

Empathy Map



PAINS

- Difficulty maintaining indoor plants regularly.
- Difficulty managing plant-care activities along with daily responsibilities.
- Inconvenience in requesting and coordinating different gardening services.
- Difficulty knowing the progress of a service request.
- Uncertainty about whether a requested service has been assigned or completed.

GOALS / NEEDS

- Keep indoor plants healthy and properly maintained.
- Have a simple way to request required gardening services.
- Manage different gardening service requirements in an organized way.
- Know the status and progress of service requests.
- Receive timely and properly coordinated gardening maintenance services.

Key Insights from the Empathy Map

1. The customer needs an organized way to manage indoor gardening maintenance services.
2. The customer needs a simple process for requesting different gardening services.
3. The customer needs visibility into the progress of a service request.
4. Regular plant maintenance can become difficult when combined with other daily responsibilities.
5. The identified needs support the problem defined in the previous “Define the Problem Statements” stage.

Connection to the Defined Problem

The empathy map shows that indoor plant owners need a simple and organized way to request, manage, and track gardening maintenance services. These insights are consistent with the final problem statement identified in the previous ideation stage.
