IDEATION PHASE – BRAINSTORM & IDEA PRIORITIZATION

Indoor Gardening Services Management

Watering | Pruning | Fertilizing

Project Name	Indoor Gardening Services Management (IGSM)
Project Type	Individual Project

Step 1: Problem Identification

Problem Area

Indoor plant owners may find it difficult to manage their plant maintenance activities regularly. They may need different gardening services such as watering, pruning, and fertilizing, but managing service requests and keeping track of their maintenance activities can be inconvenient.

Watering

Pruning

Fertilizing

Selected Problem Statement

> Indoor plant owners need a simple and organized way to request and manage gardening maintenance services because regular plant care can be difficult to manage along with their daily activities.

Why This Problem Was Selected

I identified the need for a simple service-management approach that can help indoor plant owners request the required gardening service and manage the service process in an organized manner.

Step 2: Brainstorm, Idea Listing and Grouping

The purpose of this section is to show that multiple possible ideas were considered before selecting the final project idea.

Brainstormed Ideas

No.	Brainstormed Idea
1	Indoor Gardening Service Management System
2	Gardening Service Request and Booking System
3	Plant Maintenance Scheduling System
4	Plant Care Reminder System
5	Gardening Service Tracking System
6	Gardening Technician Assignment System
7	Plant Care Information System

Idea Grouping

GROUP 1 – Gardening Service Management
• Indoor Gardening Service Management System
• Gardening Service Request and Booking System
• Gardening Service Tracking System
• Gardening Technician Assignment System

GROUP 2 – Plant Maintenance Support
• Plant Maintenance Scheduling System
• Plant Care Reminder System
• Plant Care Information System

Step 3: Idea Prioritization

Prioritization Table

Idea	Problem Relevance	Usefulness	Implementation Practicality
Indoor Gardening Service Management System	High	High	High
Gardening Service Request and Booking System	High	High	High
Plant Maintenance Scheduling System	Medium	High	High
Plant Care Reminder System	Medium	Medium	High
Gardening Service Tracking System	High	High	High
Gardening Technician Assignment System	High	High	Medium
Plant Care Information System	Medium	Medium	High

Selected Idea

Selected Idea

Indoor Gardening Services Management (IGSM)

Reason for Selection

After considering and comparing the different ideas, I selected Indoor Gardening Services Management (IGSM) because it addresses the broader problem of managing indoor gardening services in an organized manner. The concept can bring together service requests, service assignment, approval, notifications, tracking, and completion within a single service-management system.

Final Conclusion

The ideation process helped me identify the challenges involved in managing indoor gardening services, explore multiple possible solutions, and select Indoor Gardening Services Management (IGSM) as the project idea to develop further.
