REQUIREMENT PHASE – CUSTOMER JOURNEY MAP

Indoor Gardening Services Management (IGSM)

Project Name	Indoor Gardening Services Management (IGSM)	**Project Type**	Individual Project

SCENARIO

Requesting and managing an indoor gardening maintenance service

An indoor plant owner identifies a plant-care requirement, submits a gardening service request, waits for the request to be processed and assigned, receives updates, and gets the requested service completed.

CUSTOMER / PERSONA

Indoor Plant Owner

An indoor plant owner who needs regular gardening maintenance services such as watering, pruning, or fertilizing and wants an organized way to request and track those services.

Journey Stages	**1 ENTICE** Identify the Need	**2 ENGAGE** Request a Gardening Service	**3 EXPERIENCE** Request Processing and Technician Assignment	**4 EXIT** Service Completion	**5 EXTEND** Follow-up and Future Service Needs
What the customer experiences	The indoor plant owner notices that plants require maintenance or a specific gardening service.	The customer starts a gardening service request and provides the required information.	The submitted request is processed, reviewed, and assigned for service.	The requested gardening service is completed and the request reaches completion.	After the service is completed, the customer may identify additional or future plant-maintenance needs.
Interactions	The customer identifies the need for watering, pruning, or fertilizing.	The customer selects the requested service, plant type, priority, preferred date, and provides a description when required.	The request goes through the service process. Approval is handled where required, and the request is assigned to the appropriate gardening technician.	The technician completes the requested service and the service request is updated to the completed state.	The customer reviews the completed service status and may submit another gardening service request when required.
Things / Digital Touchpoints	Indoor plants and the service request interface.	Gardening service request form / record producer.	Service request record, request status, approval/assignment process, and notifications.	Service request record and completion status.	Completed service request and gardening service request interface.
Places	Home or indoor plant location.	Service request interface.	Service management system.	Indoor plant location and service management system.	Service management system and indoor plant location.
People	Primarily the plant owner.	Plant owner / requester.	Requester, manager, and technician.	Technician and requester.	Plant owner and gardening service personnel when another request is required.

Journey Stages	1 ENTICE Identify the Need	2 ENGAGE Request a Gardening Service	3 EXPERIENCE Request Processing and Technician Assignment	4 EXIT Service Completion	5 EXTEND Follow-up and Future Service Needs
Goals & Motivations	Help me keep my indoor plants healthy and properly maintained.	Help me request the gardening service I need in a simple and organized way.	Help me know that my request is being processed and assigned to someone who can provide the service.	Help me know that my requested gardening service has been completed.	Help me continue maintaining my indoor plants without difficulty.
Positive Moments	The customer recognizes the required plant-care activity and knows what type of service is needed.	The customer can provide the required service details in one request.	The customer receives confirmation or notification that the request has been approved and assigned.	The requested plant maintenance service is completed and the customer can see that the request is complete.	The customer has an organized record of the completed request and can request another service when needed.
Negative Moments	The customer may find it difficult to manage regular plant maintenance along with other daily responsibilities.	The customer may become confused or frustrated if requesting a service requires too much information or effort.	The customer may feel uncertain if there is no clear indication of the request status or assignment.	The customer may be dissatisfied if the service is delayed or if completion is not clearly communicated.	The customer may again face difficulty managing future plant-maintenance activities if there is no organized service process.
Areas of Opportunity	Make it simple for the customer to identify and request the required gardening service.	Keep the request process clear and organized and collect only the information needed to process the service.	Provide clear request status information and timely notifications about important changes.	Make completion status clear and ensure the customer receives appropriate notification when the service is completed.	Make future service requests simple and maintain an organized service-management process.

Overall Customer Journey Insight

The customer journey begins when an indoor plant owner identifies a maintenance need and continues through service request, processing, technician assignment, completion, and future service needs. The main customer requirement throughout the journey is a simple and organized way to request, manage, and track gardening maintenance services.
