Project Design Phase
Problem – Solution Fit

Project Name	Indoor Gardening Services Management (IGSM)	Project Type	Individual Project

Define CS, fit into CC

1. CUSTOMER SEGMENT(S) — CS

Indoor Plant Owners / People responsible for maintaining indoor plants

People who need regular indoor gardening maintenance but may find it difficult to consistently manage different gardening service needs.

6. CUSTOMER CONSTRAINTS — CC

- Limited time for regular plant maintenance
- Difficulty coordinating different gardening services
- Need for simple and easy request submission
- Lack of organized request/status tracking
- Need to communicate service requirements clearly
- Preference for convenient digital service management

5. AVAILABLE SOLUTIONS — AS

Alternatives available before using IGSM:

- Manual communication with a gardener or service provider
- Phone calls or messages for requesting services
- Personal notes/reminders for plant maintenance
- Informal/manual coordination of gardening tasks

Limitations:

- Request details may not be organized in one place.
- Status tracking may be difficult.
- Approval and assignment may require manual coordination.
- Maintaining a clear service history can be difficult.

Focus on J&P, tap into BE, understand RC

2. JOBS-TO-BE-DONE / PROBLEMS — J&P

- Request indoor gardening maintenance services.
- Select the required service such as Watering, Pruning, or Fertilizing.
- Provide plant-related details and service requirements.
- Specify priority and preferred date.
- Track the status of a service request.
- Receive updates about approval and technician assignment.
- Ensure the requested gardening service is completed in an organized manner.

Core problem: Indoor plant owners need a simple and organized way to request, manage, and track gardening maintenance services because regular plant care and service coordination can be difficult to manage along with their daily activities.

9. PROBLEM ROOT CAUSE — RC

Indoor plant maintenance involves recurring and different service needs, while service requests and coordination can be difficult to manage consistently alongside daily activities.

Without an organized request-management process, it can be difficult to keep service details, status, approval, assignment, and completion information together.

7. BEHAVIOUR — BE

Directly related:

- Notice a plant maintenance requirement.
- Decide which service is needed.
- Provide plant/service details.
- Request the required service.
- Check the request status.
- Wait for approval and technician assignment.
- Confirm/expect service completion.

Indirectly associated:

- Try to remember plant maintenance schedules.
- Coordinate gardening tasks around daily activities.
- Use manual communication or reminders when necessary.

Representative behaviour inferred from the problem.

Identify strong TR & EM

3. TRIGGERS — TR

- Indoor plants need watering or regular maintenance.
- Plants require pruning or fertilizing.
- The owner notices that routine plant care has been missed.
- A specific gardening maintenance need becomes urgent.
- The owner wants to schedule a preferred service date.

4. EMOTIONS: BEFORE / AFTER — EM

Before using an organized service-management process:

- Concerned about missing plant maintenance
- Uncertain about whether the request is being handled
- Inconvenienced by manually coordinating service
- Less confident about request status

After using IGSM:

- More confident that the request is recorded
- Clearer understanding of request status
- More organized service coordination
- Better visibility of approval, assignment, and completion

10. YOUR SOLUTION — SL

Indoor Gardening Services Management (IGSM) is a ServiceNow scoped application that provides an organized process for submitting, approving, assigning, tracking, and completing indoor gardening service requests.

Solution capabilities:

- Request submission through the Garden record producer
- Selection of Watering, Pruning, or Fertilizing service
- Plant type, priority, description, and preferred date
- Automatic request number
- Manager approval and technician assignment
- Requester notification and request state tracking
- Completion management and SLA tracking
- Role-based access control
- Backend validation and client-side form behavior

Problem–Solution Fit: IGSM fits the identified problem by providing a structured digital process that makes indoor gardening service requests easier to submit, manage, track, assign, and complete.

8. CHANNELS OF BEHAVIOUR — CH

8.1 ONLINE

ServiceNow interface / Service Portal

The requester uses the digital interface to submit and manage an indoor gardening service request.

8.2 OFFLINE

- Direct communication with gardening service personnel
- Manual coordination of gardening work
- Physical observation of plant condition and maintenance needs
