Project Design Phase

Proposed Solution

Project Name	Indoor Gardening Services Management (IGSM)
Project Type	Individual Project

S.No.	Parameter	Description
1.	**Problem Statement (Problem to be solved)**	Indoor plant owners need regular maintenance such as watering, pruning, and fertilizing. Managing these different service needs and coordinating requests can become difficult alongside daily activities. **Indoor plant owners need a simple and organized way to request, manage, and track gardening maintenance services because regular plant care and service coordination can be difficult to manage along with their daily activities.**
2.	**Idea / Solution description**	**Indoor Gardening Services Management (IGSM)** is a ServiceNow scoped application that provides a structured digital process for submitting, approving, assigning, tracking, and completing indoor gardening service requests. The main capabilities are: • Submit a gardening service request • Select Watering, Pruning, or Fertilizing • Enter plant type, priority, description, and preferred date • Generate a request number • Send the request for manager approval • Assign approved requests to technicians • Notify the requester • Track request state • Complete the service • Apply SLA tracking • Control access using roles and ACLs
3.	**Novelty / Uniqueness**	• Brings indoor gardening service requests into one structured ServiceNow application • Combines request submission, manager approval, technician assignment, notifications, status tracking, and completion in one workflow • Uses ServiceNow Flow Designer to automate the service-request lifecycle • Uses roles, ACLs, SLAs, Business Rules, Client Scripts, and UI Policies to create a controlled service-management process **The project integrates the complete indoor gardening service-request lifecycle into a single structured ServiceNow application.**

S.No.	Parameter	Description
4.	**Social Impact / Customer Satisfaction**	IGSM is expected to benefit users by: • Making gardening service requests more organized • Reducing confusion about request status • Providing better visibility of approval and technician assignment • Helping users communicate service requirements clearly • Supporting timely handling of gardening maintenance requests *These are expected benefits of the solution; no measured customer satisfaction results are claimed.*
5.	**Business Model (Revenue Model)**	IGSM is developed as an individual academic project. No revenue model, pricing, or revenue figures have been defined for the solution. Its value lies in providing an organized service-management process for indoor gardening service requests.
6.	**Scalability of the Solution**	IGSM is developed on the ServiceNow platform, where application functionality, data, workflow automation, and access control are managed within the platform. The scoped application structure keeps IGSM functionality organized within its application scope.
