ACCEPTANCE TESTING

UAT Execution & Report Submission

Project Name	Indoor Gardening Services Management (IGSM)
Project Type	Individual Project
Maximum Marks	4 Marks

1. Purpose of Document

This document describes the User Acceptance Testing (UAT) plan and report for the Indoor Gardening Services Management (IGSM) ServiceNow scoped application. The purpose is to verify whether the application supports its intended service-request lifecycle, including request creation, manager approval, technician assignment, notifications, state tracking, SLA behaviour, and access control.

The report records test coverage, execution status, and defects identified during testing. UAT has not been declared complete or accepted in this document; the results below remain to be updated with actual test evidence.

2. Defect Analysis

This report shows the number of resolved or closed defects at each severity level and how they were resolved. Defect counts have not been recorded yet.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded
Duplicate	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded
External	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded
Fixed	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded
Not Reproduced	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded
Skipped	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded
Won't Fix	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded
Totals	Not Recorded	Not Recorded	Not Recorded	Not Recorded	Not Recorded

No verified defect records were supplied for this report. Defect severity, resolution category, and totals must be updated using actual test findings.

Severity levels (project testing classification, not verified defect findings):

Severity 1	Critical issue preventing essential application use.
Severity 2	Major issue affecting an important workflow.
Severity 3	Moderate issue affecting a feature but allowing other functions to continue.
Severity 4	Minor issue with limited impact.

3. Test Case Analysis

This report shows the planned test cases and the number that have passed, failed, and remain untested. Each test area is planned as one test case.

Test Case ID	Test Area / Scenario	Total Cases	Not Tested	Fail	Pass
TC-01	**Request Creation** Verify that a requester can submit a gardening service request through the Garden Record Producer and that the required details and request number are recorded.	1	1	0	0
TC-02	**Service and Field Validation** Verify service type choices (Watering, Pruning, Fertilizing), plant type, priority, description, and preferred date.	1	1	0	0
TC-03	**Manager Approval** Verify that the manager can review a request and approve or reject it, and that the appropriate state is recorded.	1	1	0	0
TC-04	**Technician Assignment** Verify that an approved request is assigned to the IGSM Technicians group and becomes available for the appropriate technician workflow.	1	1	0	0
TC-05	**Requester Notifications** Verify that the intended requester notification is generated for the relevant workflow event.	1	1	0	0
TC-06	**Request State Tracking** Verify that the request state reflects the workflow, including New, Assigned, Rejected, and Completed where applicable.	1	1	0	0
TC-07	**SLA Behaviour** Verify the Response SLA configuration, which starts at New and stops at Assigned, and verify the Completion SLA configuration against its actual configured conditions.	1	1	0	0
TC-08	**Business Rules** Verify backend validation, including the configured default priority behaviour when priority is blank and any implemented state validations.	1	1	0	0
TC-09	**Client Scripts and UI Policies** Verify the configured form behaviour, including the rule that makes Description mandatory when Priority is High.	1	1	0	0
TC-10	**Roles and ACLs** Verify that requester, technician, and manager access matches the configured roles and access-control rules.	1	1	0	0
TC-11	**End-to-End Workflow** Verify the complete request lifecycle from submission through approval, technician assignment, notification, and completion.	1	1	0	0
Totals		**11**	**11**	**0**	**0**

Test scenarios are defined for UAT. Actual Pass/Fail counts must be updated after executing the tests in the ServiceNow instance.

Pass and Fail are recorded as 0 because no execution evidence has been supplied; these values are not claims of successful execution. Status of every test case: Pending Execution.

4. UAT Summary

The planned UAT covers the core IGSM workflow, request validation, SLAs, notifications, and security. Final acceptance should be determined only after the test cases are executed, failures are reviewed, and critical issues are resolved.

Until then, the application is not declared fully tested, defect-free, or formally accepted.
